VC Signal Desk · Components Map

VC Fundraising Pipeline Intelligence · Problem Statement 10 · AI and its Applications, Section 1 Final

Live app: vc-pipeline-intelligence-ai.vercel.app (no login)
Repository: github.com/adityaharsh06/vc-pipeline-intelligence-ai
Stack: Next.js 16 on Vercel · Supabase Postgres · Gemini Flash only

Live external data / database · Gemini Flash + pipeline-owned signal columns · Vikram-owned, protected columns · Optional / monitoring path

Numbers match the component table on page 2.

Also live in the app at /architecture

Components · responsibilities, data flow and ownership

All AI tasks use **Gemini Flash** (gemini-3.8-flash → 3.7-flash → flash-latest → 3-flash-preview fallback). No other model or LLM provider is used.

#	COMPONENT	IMPLEMENTATION	RESPONSIBILITY
1	Vercel Cron	`vercel.json → /api/cron`	Starts a scan Mon & Thu 09:30 IST, before Vikram works his pipeline. A 10:00 trigger only resumes a stalled run. Protected by CRON_SECRET.
2	Refresh now	`POST /api/run`	On-demand scan for the evaluator. Public by design (no login), rate-limited by a 5-minute cooldown.
3	Run orchestrator	`lib/pipeline.ts, after()`	Processes investors in batches of 8, records progress after each batch, stays inside the 300 s function limit and hands off to /api/run/continue. Resumes stalled runs.
4	Google News RSS	`lib/sources.ts`	Live news about each firm and partner from the last 30 days. Publication dates come from the publisher.
5	Bing News RSS	`lib/sources.ts`	Second live news source with direct article URLs, so signals link straight to the publisher.
6	Gemini + Google Search	`GEMINI_GROUNDING=on`	Optional grounded search for blogs, podcasts and events. Built and wired, but off: the free-tier key has no grounding quota.
7	Gemini Flash classifier	`lib/gemini.ts · JSON schema`	One call per 8 investors. Decides if each item is really about the investor (rejects same-name people and passing mentions), signal type, relevance to B2B logistics SaaS (0–100), same-event grouping, a why-now note and an opening line.
8	Scoring rules	`lib/scoring.ts`	Deterministic follow-up score and recommended action. The same evidence always gives the same score.
9	vc_apply_signal()	`Postgres function`	The pipeline's only write path into Vikram's table: last_signal_date, signal_summary, follow_up_score, recommended_action.
10	vc_investors	`Supabase table`	Vikram's pipeline of 50 investors. Always reflects the latest run.
11	Guard trigger	`vc_guard_columns`	Rejects any pipeline write to status, last_contact_date or notes, enforced by the database itself.
12	Audit tables	`vc_runs · vc_assessments · vc_manual_edits`	Run history, Gemini calls, errors, MD5 fingerprint of manual columns before and after each run, all evidence and rejected items, and Vikram's edit log.
13	vc_update_manual()	`Postgres function`	Vikram's write path: manual columns only, and every change is logged.
14	Dashboard	`Next.js 16 · Vercel bom1`	Server-rendered pages. The Supabase secret key never reaches the browser.
15	Vikram / evaluator	`browser`	Reads who to contact and why, opens evidence, edits notes, triggers refreshes.

ONE RUN, STEP BY STEP

1. Cron (1) or Refresh now (2) starts a run; the orchestrator (3) fingerprints the 🔒 columns.
2. For 8 investors at a time, query Google News (4) and Bing News (5) live: 4 searches per investor.
3. Drop duplicates and anything older than 30 days (logged as rejected).
4. One Gemini Flash call (7) classifies the whole batch.
5. Merge articles about the same event; scoring rules (8) pick the strongest signal.
6. Write the 4 signal columns via vc_apply_signal (9); store full evidence in audit tables (12).
7. If every source fails for an investor, leave its row unchanged. A failure never counts as "quiet".
8. Repeat until all 50 are done, handing off to a new invocation when needed; then fingerprint again and record ✓ untouched.

COLUMN OWNERSHIP

🔒 Vikram
status · last_contact_date · notes
Written only via vc_update_manual (13)

⟳ Pipeline
last_signal_date · signal_summary · follow_up_score · recommended_action
Written only via vc_apply_signal (9)

FOLLOW-UP SCORE RUBRIC (OUT OF 100)

Relevance to B2B logistics SaaS	**35**	Gemini 0–100 × 0.35
Recency	**30**	30 × (1 − days ÷ 40)
Signal type	**15**	investment 15 … portfolio news 8
Evidence quality	**10**	dated article 10 · unconfirmed 3
Relationship	**10**	yet to reach out 10 … contacted <7 days ago 1

Reach out this week score ≥ 70 and relevance ≥ 70 · Tailored note score ≥ 55 and relevance ≥ 45

Secrets (Supabase secret key, Gemini key, CRON_SECRET) live only in Vercel environment variables.
